RELEASE 1.0

This is a Database for Plays Application for the UAH Library for the Theater department. It acts a tool to keep track of plays via checking out and searching by certain features.

The Latest Release

1. New Features Since Last Release

This is the first release (1.0) and the features are:

- a. Options for Admin/User Registration and Login
- b. Adding a Play (Admin)
- c. Deleting a Play (Admin)
- d. Checking out a Play (General User)
- e. Search for Plays (Both Admin and General User)
- f. Return Play (Both Admin and General User)
- g. Contact User via email (Admin)
- h. Add/Delete User (Admin)
- i. Edit Play (Admin)

2. Known bugs and defects

- a. Users cannot be blocked, only deleted; Nothing is preventing the same user from creating another login.
- b. Users and admins cannot be logged in on multiple devices simultaneously, only the most recently logged on device will be able to function.

To Use

1. Pre-requisites:

- a. Chrome is the preferred web browser and the one in which the most testing was done for the application. The tested and confirmed browsers are Firefox, Chrome, and Safari.

2. Run Instructions:

- a. Open the web application on a valid web browser.

3. Troubleshooting:

- a. Since this is a web application, no troubleshooting should be necessary. If one finds that the site gets stuck on a certain page, simply close out the tab or window in which it is being run and open a new page.

Third Party Software Involved

Although not directly related to the user or required for everyday use of the software, if the project is to be completely taken over by another party, the party would have to take into account the database itself. For this release, we used mongoDB and Heroku cloud services.
